By education, I am a teacher of mathematics and computer science, and I worked in a school for four years. After that, my entire professional career has been connected to the toy industry. I have experience in various positions, including a commodity expert, foreign economic activity manager, category manager and brand manager. However, for the past 12 years, my primary specialization has been data analytics.

I develop and maintain comprehensive company analytics. I designed a complex data model in Power Pivot (MS Excel) and MS Power BI, which enables the analysis, monitoring, and forecasting of a retail chain's performance across all key metrics.

I studied Data Science for six months, which allowed me to master new tools and expand the scope of data analysis.

In my projects, I use a wide range of software and tools for data preparation and analysis: Python, SQL, and Power Query for data processing; MS Excel, MS Power BI, DAX functions, and Google Sheets for direct analysis, visualization, and the creation of analytical dashboards.

Beyond analyzing the operations of a toy retail chain, I have also completed projects related to the analysis of the grain elevator equipment market, research on major global retail chains, and even the ongoing analysis of bowling tournaments, in which I actively participate.
