MYKHAILO GAMALIA

Data Analyst | Excel | Power BI | SQL | Python

A professional data analyst with over 14 years of experience in business analytics, management reporting systems, and implementation of data-driven solutions.

Developed and maintained comprehensive analytics for the PLANETTOYS retail chain. The data model in the form of interactive dashboards with multi-factor dynamic filtering was built using **Power Query** and **DAX functions** within **Power Pivot (MS Excel)** and **Power BI** environments to analyze, monitor, and forecast store network performance across all key indicators (sales, inventory, turnover, seasonality, profitability).

Thanks to the implementation of this analytical tool:

- effective collaboration among category managers, inventory managers and company leadership was established;
- supply chains were structured and optimized;
- product assortment and inventory levels were optimized.

A range of data-driven solutions was implemented, directly contributing to improved operational efficiency and financial performance, including:

- implementation of dynamic product assortments based on demand at specific retail locations;
- selection of optimal assortments according to sales performance and floor space utilization;
- reduction of low-turnover products and excess assortments.

In my projects, I use a wide range of software and tools for data preparation, analysis and visualization: **Power Query, VBA macros, SQL, Python, AI agents** for data processing; **MS Excel, Power BI, Tableau, DAX functions, Google Sheets** for analysis, visualization and development of interactive dashboards. My **Data Science** training enabled me to master new tools and expand the scope of data analytics.

In addition to comprehensive analysis of a toy retail network, I have worked on projects related to agricultural elevator equipment market analysis, automation of defense resource management within the Armed Forces of Ukraine using the **SAP ERP** platform, research into sales performance of major global retail chains and continuous analysis of bowling tournaments in which I actively participate. Project examples are available in my **GitHub** repository (link accessible via QR code).

By education, I am a teacher of mathematics and computer science with four years of experience in secondary education. I have professional experience as a product expert, foreign economic activity manager, category manager, brand manager and data analyst.

WORK EXPERIENCE

Oct 2025 - Jan 2026

Data Analyst, SAP ERP Implementation Team (Armed Forces of Ukraine)

Better Regulation Delivery Office (BRDO), Київ

- Automation of defense resource management in the Armed Forces of Ukraine using the SAP ERP platform.
- Population and maintenance of asset and inventory master data: name recognition, classification, deduplication, standardization, and template-based structuring.
- Monitoring the proper use of master data and ensuring alignment with system requirements.
- Identification and correction of errors in master data and system records.
- Collection, analysis, and systematization of information from open sources.

Jul 2012 - Sept 2025
